Sobre este livro

Sejam bem-vindos!

O objetivo deste livro é disponibilizar para consulta anotações de códigos R de forma prática e rápida. Não há explicações aprofundadas nem se pretende esgotar as possibilidades do conteúdo apresentado, assim, esta documentação deve ser utilizada somente como um guia rápido, pois não passa de um conjunto de rascunhos apreendidos no dia-a-dia da manipulação de dados e na apresentação de resultados. O conteúdo poderá ser baixado nos formatos **.pdf** ou **epub**, mas a proposta é que o conteúdo seja dinâmico, com atualizações semanais. A estrutura de construção está disponível no GitHub.

Críticas, sugestões ou contribuições de código e conteúdo podem ser enviadas para lucascgermano@gmail.com. Ficarei muito feliz, qualquer que seja o motivo do contato.

Chapter 1

Leitura de arquivos de texto

1.1 Definição de diretório de trabalho

```
setwd('dados/')          # ou

# Ctrl + Shift + h      # ou

# file.choose()          # Abre janela de navegação. Ao selecionar o arquivo, ele retorna o caminho

# Se inserir aspas ' ' e inserir em Tab entre elas, abrirá navegação.
```

1.2 Arquivos .csv

.csv = Arquivos separados por vírgula (,) .csv2 = Arquivos separados por ponto e vírgula (;) Os argumentos das funções são os mesmos, por isso o exemplo será dado somente para .csv2 (mais usado)

```
dados <- read.csv2(file = 'dados/dados.csv')
head(dados, 5)          # Exibir as 5 primeiras linhas dos dados.
```

##	X	data	code_mn	muni	faixa	casos	obitos	masc	fem	ano	mes	semana
## 1	1	2020-01-01	353070	Mogi Guaçu	30 a 39	1	0	0	1	2020	1	1
## 2	2	2020-01-20	353070	Mogi Guaçu	50 a 59	1	0	1	0	2020	1	3
## 3	3	2020-01-29	352380	Itobi	30 a 39	1	0	1	0	2020	1	5
## 4	4	2020-01-30	353050	Mococa	70 a 79	1	0	0	1	2020	1	5
## 5	5	2020-02-02	353080	Mogi Mirim	40 a 49	1	0	0	1	2020	2	5

```
##      pop
## 1 150713
## 2 150713
## 3   7830
## 4 68788
## 5 92715
```

Argumentos principais

Os argumentos são os mesmos da função `read.table()`.

Argumento	Definição
<code>file</code>	Nome do arquivo que será lido, contendo o caminho do diretório.
<code>header</code>	Logical. Indica se o arquivo contém os nomes das colunas na primeira linha.
<code>sep</code>	Tipo de separador de campo. Default é <code>“;”</code> .
<code>dec</code>	Tipo de separador de decimal. Default é <code>“.”</code> .
<code>nrows</code>	Integer. Número máximo de linhas a serem lidas.
<code>skip</code>	Integer. Número de linhas que serão puladas antes de iniciar a leitura dos dados.
<code>fill</code>	Logical. Se <code>TRUE</code> , caso as linhas tenham comprimento desigual, serão adicionados campos em branco.
<code>blank.lines.skip</code>	Logical. Se <code>TRUE</code> linhas vazias serão ignoradas.
<code>stringsAsFactors</code>	Logical. Se <code>TRUE</code> os vetores <code>character</code> serão convertidos para <code>factors</code> .
<code>fileEncoding</code>	Character string. Define o encoding que será usado. Ex. <code>fileEncoding = “UTF-8”</code> ou <code>“Latin-1”</code> .
<code>skipNul</code>	Logical. Se <code>TRUE</code> os nulos (<code>NA</code>) devem ser ignorados.

Pode-se ler também arquivos da internet, ex:

```
read.csv2(file = ‘https://raw.githubusercontent.com/seade-R/dados-covid-sp/master/data/dados_covid_sp.csv’)
```

Chapter 2

Cross-references

Cross-references make it easier for your readers to find and link to elements in your book.

2.1 Chapters and sub-chapters

There are two steps to cross-reference any heading:

1. Label the heading: `# Hello world {#nice-label}`.
 - Leave the label off if you like the automated heading generated based on your heading title: for example, `# Hello world = # Hello world {#hello-world}`.
 - To label an un-numbered heading, use: `# Hello world {-#nice-label}` or `{# Hello world .unnumbered}`.
2. Next, reference the labeled heading anywhere in the text using `\@ref(nice-label)`; for example, please see Chapter 2.
 - If you prefer text as the link instead of a numbered reference use: any text you want can go here.

2.2 Captioned figures and tables

Figures and tables *with captions* can also be cross-referenced from elsewhere in your book using `\@ref(fig:chunk-label)` and `\@ref(tab:chunk-label)`, respectively.

See Figure 2.1.

```
par(mar = c(4, 4, .1, .1))  
plot(pressure, type = 'b', pch = 19)
```

Figure 2.1: Here is a nice figure!

Don't miss Table 2.1.

```
knitr::kable(  
  head(pressure, 10), caption = 'Here is a nice table!',  
  booktabs = TRUE  
)
```

Table 2.1: Here is a nice table!

temperature	pressure
0	0.0002
20	0.0012
40	0.0060
60	0.0300
80	0.0900
100	0.2700
120	0.7500
140	1.8500
160	4.2000
180	8.8000

Chapter 3

Parts

You can add parts to organize one or more book chapters together. Parts can be inserted at the top of an .Rmd file, before the first-level chapter heading in that same file.

Add a numbered part: `# (PART) Act one {-}` (followed by `# A chapter`)

Add an unnumbered part: `# (PART*) Act one {-}` (followed by `# A chapter`)

Add an appendix as a special kind of un-numbered part: `# (APPENDIX) Other stuff {-}` (followed by `# A chapter`). Chapters in an appendix are prepended with letters instead of numbers.

Chapter 4

Footnotes and citations

4.1 Footnotes

Footnotes are put inside the square brackets after a caret `^[]`. Like this one ¹.

4.2 Citations

Reference items in your bibliography file(s) using `@key`.

For example, we are using the **bookdown** package [Xie, 2022] (check out the last code chunk in `index.Rmd` to see how this citation key was added) in this sample book, which was built on top of R Markdown and **knitr** [Xie, 2015] (this citation was added manually in an external file `book.bib`). Note that the `.bib` files need to be listed in the `index.Rmd` with the YAML `bibliography` key.

The RStudio Visual Markdown Editor can also make it easier to insert citations: <https://rstudio.github.io/visual-markdown-editing/#/citations>

¹This is a footnote.

Chapter 5

Blocks

5.1 Equations

Here is an equation.

$$f(k) = \binom{n}{k} p^k (1-p)^{n-k} \quad (5.1)$$

You may refer to using `\@ref{eq:binom}`, like see Equation (5.1).

5.2 Theorems and proofs

Labeled theorems can be referenced in text using `\@ref{thm:tri}`, for example, check out this smart theorem 5.1.

Theorem 5.1. *For a right triangle, if c denotes the length of the hypotenuse and a and b denote the lengths of the **other** two sides, we have*

$$a^2 + b^2 = c^2$$

Read more here <https://bookdown.org/yihui/bookdown/markdown-extensions-by-bookdown.html>.

5.3 Callout blocks

The R Markdown Cookbook provides more help on how to use custom blocks to design your own callouts: <https://bookdown.org/yihui/rmarkdown-cookbook/custom-blocks.html>

Chapter 6

Sharing your book

6.1 Publishing

HTML books can be published online, see: <https://bookdown.org/yihui/bookdown/publishing.html>

6.2 404 pages

By default, users will be directed to a 404 page if they try to access a webpage that cannot be found. If you'd like to customize your 404 page instead of using the default, you may add either a `_404.Rmd` or `_404.md` file to your project root and use code and/or Markdown syntax.

6.3 Metadata for sharing

Bookdown HTML books will provide HTML metadata for social sharing on platforms like Twitter, Facebook, and LinkedIn, using information you provide in the `index.Rmd` YAML. To setup, set the `url` for your book and the path to your `cover-image` file. Your book's `title` and `description` are also used.

This `gitbook` uses the same social sharing data across all chapters in your book—all links shared will look the same.

Specify your book's source repository on GitHub using the `edit` key under the configuration options in the `_output.yml` file, which allows users to suggest an edit by linking to a chapter's source file.

Read more about the features of this output format here:

<https://pkgs.rstudio.com/bookdown/reference/gitbook.html>

Or use:

```
?bookdown::gitbook
```
